AWS, GCP, Javascript (Node/React/Next/Astro), Python, SQL, Go, Java

Experience

The Washington Post

New York, NY

SENIOR SOFTWARE ENGINEER, SITE

July 2022 - June 2026

- Developed **full-stack applications and distributed systems** for the Washington Post website. My services helped the newsroom edit and render the homepage, sections, and articles for **millions of readers across the globe**.
- Developed Javascript and Python APIs to support mobile applications and content feeds.
- Used Node.js, Next.js, React.js, Astro.js, HTML, CSS, Nginx, Python, Redis, DynamoDB, GraphQL, Docker, ECS, Lambda, and DataDog.
- Released features to support **personalization, Product/Design roadmap, UX modernization, advertising, performance, SEO, observability, CI/CD**.

BikeHopper

San Francisco, CA

TECHNICAL LEAD, ROUTER AND FRONTEND

Jan 2022 - July 2022

- A free and open source bike-transit router for the bay area.
- Developed a **multi-criteria bike-to-transit geospatial routing engine**, forked from GraphHopper, written in Java.
- Developed a React.js frontend to display **beautiful bike and transit routes** in a mobile-first webapp.

Mapbox

remote

SENIOR SOFTWARE ENGINEER, PLATFORM

September 2019 - January 2022

- Developed **backend platforms and tools** for Mapbox APIs and Spark/Airflow ETL data pipelines. Using an event-driven distributed system Javascript architecture, my platforms optimized for cost/stability/performance to serve API and data services on EC2/Fargate Spot clusters.
- Developed a **SQL cost reporting database using S3, Athena, Glue, Lambda and Apache Spark** in the data warehouse, and presented monthly cost analysis to the company using the data.
- Developed an observability suite for the compute platform, using events to generate **structured logs, EMF metrics, and dashboards**.

Uber

San Francisco, CA

SENIOR SOFTWARE ENGINEER, CLOUD

October 2015 - September 2019

- Developed **Uber's first production cloud infrastructure stack** in AWS and GCP, by adapting on-premises infrastructure services, tools, and distributed systems (Golang, Java, Python) for the cloud. This stack supported over **100,000 service cores**.
- Designed, implemented, and maintained the team's principle **MVCS Java service** to deliver fully-functional Uber zones on EC2.

Education

University of Chicago

Chicago, IL

Bachelor of Science in Computer Science

June 2015
