AWS, GCP, Javascript (Node/React/Next/Astro), Python, Go, Java

Experience

The Washington Post

SENIOR SOFTWARE ENGINEER, SITE

New York, NY

July 2022 - June 2026

- Cross-functional full-stack engineer trusted with the Post's **web render stack and mobile app backend API**, a mix of read-only and read-write Node.js, React, Nginx, and Python services. This stack serves the homepage, hundreds of sections, and thousands of articles to **millions of readers across the globe**.
- Tech lead on total site rewrite to a cutting-edge **Astro.js platform** from the legacy Next.js platform.
- Tech lead on high-priority site migration to a **headless CDN across a dozen services**, paired with a reimplement in modern cloud infra-as-code.
- Released hundreds of features to the site to support **For You personalization, UX modernization, and SEO performance**.

BikeHopper

A FREE AND OPEN SOURCE BIKE-TRANSIT ROUTER FOR THE BAY AREA

github.com/bikehopper

Jan 2022 - July 2022

- Co-authored a **multi-criteria bike-to-transit routing engine**, forked from GraphHopper, written in Java.
- Co-authored a React frontend to display **beautiful bike and transit routes** in a mobile-first webapp.

Mapbox

SENIOR SOFTWARE ENGINEER, PLATFORM

remote

September 2019 - January 2022

- Tech lead on Mapbox's compute platform, consisting of a layer of **AWS ECS compute clusters highly customized for API and data services** to balance cost and stability on EC2 and Fargate Spot.
- Authored **AWS Lambda and data pipeline automation** including an on-demand safety trigger, instance selection suggestions, log processing, and cost reporting.
- Planned and authored the compute platform's observability suite, using events to generate **structured logs, EMF metrics, and dashboards**.
- Created onboarding and on-call training resources, interviewed and mentored new teammates, and planned the team's biyearly goals.

Uber

SOFTWARE ENGINEER, CLOUD

San Francisco, CA

October 2015 - September 2019

- Tech lead on **Uber's first production cloud infra stack**. Drove alignment with service owners, deployed and productionized infra stack, and created policy for this new environment. This stack supported over **100,000 service cores**.
- Designed, implemented, and maintained the team's principle **MVCS Java service** to deliver fully-functional Uber infra zones on EC2.

Education

University of Chicago

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Chicago, IL

June 2015
